Summary

I build evidence-based lead systems, Telegram automations and operational workflows that help businesses move faster. My work is focused on outreach, lead verification and business process automation for remote and digital operations.

Projects

ProofLeads — Live, not yet launched

- Built a Telegram-based leads system that delivers lead details with proof, contact information and pitch guidance.
- Created the pipeline engine, Proofline, using deterministic checks and evidence bundles before a lead is sent.
- Used aiogram + FastAPI, Neon Postgres, Paystack and GitHub Actions on free tiers.

Termcard — In development

- Developing an automated result computation and report card tool for schools.
- Managing admin and teacher roles, per-school branding, batch student upload and PDF report generation.
- Using Supabase, Postgres and an agentic workflow to handle versioned grading configuration.

Houseplug — In development

- Building a WhatsApp booking bot for students and anyone looking for a room near school.
- Designed a listing and booking flow for students, owners and student scouts.
- Focused on simple user flows for listing homes, booking rooms and rewarding scouts.

Experience

Intern, ICT department

Worked on university web systems and refactored the IJMB portal to work for part-time students.

Founder and coordinator, devs club

Started and ran a devs club with a CS lecturer and classmates, teaching programming and cybersecurity with hands-on practice sessions.

Education

Computer Science and Education

Federal University of Education, Pankshin (FUEP), currently 300 level.

Skills

Languages: Python, JavaScript

Data and backend: Supabase, Postgres, FastAPI

Automation and bots: Telegram bots, aiogram, AI automation, GitHub Actions

Tools: Paystack, Cloudflare Pages, Vercel, basic cybersecurity
